

Conducting Quick User Testing

Objective

The interactive prototype was tested to check whether users could easily navigate the application and complete common tasks.

Participants

The prototype was tested with **3 college students**.

Tasks Performed

The participants were asked to complete the following tasks:

- Open the application.
 - Login using the login screen.
 - View today's tasks.
 - Add a new task.
 - Save the task.
 - View the completed tasks.
 - Return to the home screen.
-

User Testing Results

- All participants were able to complete the tasks successfully.
 - The navigation between screens was simple and easy to understand.
 - Users found the buttons clearly visible.
 - The task creation process was quick and straightforward.
 - The overall interface was clean and easy to use.
-

Feedback Received

The following feedback was collected from the users:

- Increase the size of some buttons for easier interaction.

- Add more animations to improve the user experience.
 - Display a confirmation message after saving a task.
 - Provide reminder notifications in future versions.
 - Include a search feature for finding tasks quickly.
-

Design Refinements

Based on the feedback, the following improvements were considered:

- Improved spacing between interface elements.
 - Increased the size of important buttons.
 - Added smoother screen transitions.
 - Improved navigation between screens.
 - Planned additional features such as reminders and task search for future updates.
-

Conclusion

The interactive prototype successfully demonstrated the application's workflow. Users were able to complete all tasks without difficulty, and the feedback collected will help improve future versions of the application.
